# Service Manual

ORDER NO. RRV2855

**DVD RECORDER** 

# **DVR-510H-S**

### THIS MANUAL IS APPLICABLE TO THE FOLLOWING MODEL(S) AND TYPE(S).

Model	Туре	Power Requirement	Regional restriction codes (Region No.)	Remarks
DVR-510H-S	KUXU/CA	AC120V	1	

- When servicing this model, some service procedures may reset the settings that customer set (\*) to the factory default settings. Make sure to explain this to the customer.
- (\*): Initial Setup (Clock Setting, Remote Control Set, Channel settings, Video Out settings, Audio In settings, Audio Out settings, Language settings)

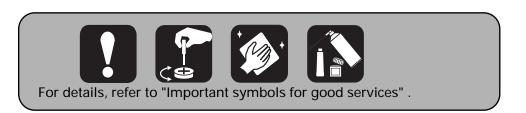

Refer to the chapter 13 of the Operating Instructions for more details.

An HDD (Hard Disc Drive) is mounted in this product.

The HDD is a precision instrument very vulnerable to shock and electrostatic charges. Please read "7.4 Cautions on Handling the HDD" in this manual and exercise sufficient caution when handling the HDD itself, as well as the product with the HDD built in.

When an HDD becomes defective and inoperable, restoration of the user's data recorded on the HDD, or copying of the user's recorded data to other media (such as a new HDD) is totally impossible. Before servicing, OBTAIN THE USER'S PRIOR CONSENT to that effect.

The user must be made aware that all recorded data are deleted if the HDD is intialized.

### SAFETY INFORMATION

This service manual is intended for qualified service technicians; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual.

Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

#### WARNING

В

С

D

Е

F

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

### NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols - (fast operating fuse) and/or - (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

### REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible — (fusible de type rapide) et/ou — (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

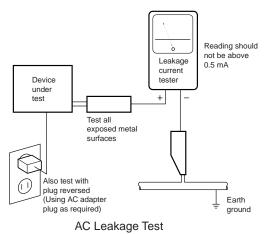

### (FOR USA MODEL ONLY)

### 1. SAFETY PRECAUTIONS

The following check should be performed for the continued protection of the customer and service technician.

### LEAKAGE CURRENT CHECK

Measure leakage current to a known earth ground (water pipe, conduit, etc.) by connecting a leakage current tester such as Simpson Model 229-2 or equivalent between the earth ground and all exposed metal parts of the appliance (input/output terminals, screwheads, metal overlays, control shaft, etc.). Plug the AC line cord of the appliance directly into a 120V AC 60 Hz outlet and turn the AC power switch on. Any current measured must not exceed 0.5 mA.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE APPLIANCE TO THE CUSTOMER.

### 2. PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in the appliance have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a  $\triangle$  on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire, or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

- IMPORTANT

THIS PIONEER APPARATUS CONTAINS LASER OF CLASS 1.
SERVICING OPERATION OF THE APPARATUS SHOULD BE DONE BY A SPECIALLY INSTRUCTED PERSON.

LASER DIODE CHARACTERISTICS – MAXIMUM OUTPUT POWER: 50 mw WAVELENGTH: 658 nm WARNING!

DEVICE INCLUDES LASER DIODE WHICH EMITS INVISIBLE INFRARED RADIATION WHICH IS DANGEROUS TO EYES. THERE IS A WARNING SIGN ACCORDING TO PICTURE 1 INSIDE THE DEVICE CLOSE TO THE LASER DIODE.

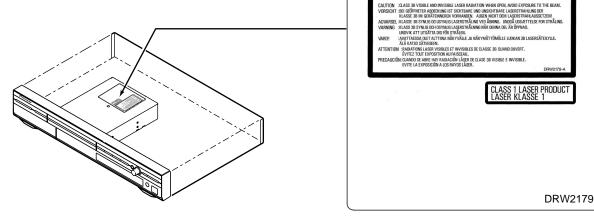

LASER
Picture 1
Warning sign for laser radiation

В

D

Ε

### ■ LABEL CHECK

\* Some models have different caution labels like the figure below. OPEN. AVOID DIRECT EXPOSURE TO BEAM.
DANGER
PRÉSENCE DE RAYONNEMENT LASER, VISIBLE
ET INVISIBLE APRES DUVERTURE. ÉVITEZ
TOUTE EXPOSITION DIRECTE AU RAYON LASER. DAY DRW2080 DRW2152 Additional Laser Caution -1. The ON/OFF(ON:low level,OFF:high level) status of the CLAMP signals for detecting the loading state are detected by the drive CPUs, and the design prevents laser diode oscillation when the CLAMP signal turns OFF. In normal operation, if no disc is clamped, the laser diode oscillation is disabled. However, the interlock does not always operate in the test 2. When the cover is opened, close viewing of the objective lens with the naked eye will cause exposure to a Class 3A laser beam.

DVR-510H-S

Ω

[Important symbols for good services]
In this manual, the symbols shown-below indicate that adjustments, settings or cleaning should be made securely.
When you find the procedures bearing any of the symbols, be sure to fulfill them:

Α

В

D

Е

You should conform to the regulations governing the product (safety, radio and noise, and other regulations), and should keep the safety during servicing by following the safety instructions described in this manual.

### 2. Adjustments

To keep the original performances of the product, optimum adjustments or specification confirmation is indispensable. In accordance with the procedures or instructions described in this manual, adjustments should be performed.

### 3. Cleaning

For optical pickups, tape-deck heads, lenses and mirrors used in projection monitors, and other parts requiring cleaning, proper cleaning should be performed to restore their performances.

### 4. Shipping mode and shipping screws

To protect the product from damages or failures that may be caused during transit, the shipping mode should be set or the shipping screws should be installed before shipping out in accordance with this manual, if necessary.

### 5. Lubricants, glues, and replacement parts

Appropriately applying grease or glue can maintain the product performances. But improper lubrication or applying glue may lead to failures or troubles in the product. By following the instructions in this manual, be sure to apply the prescribed grease or glue to proper portions by the appropriate amount. For replacement parts or tools, the prescribed ones should be used.

# 4.5 FLKY and LEDB ASSYS

- NOTES: Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
  - The ⚠ mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
  - When ordering resistors, first convert resistance values into code form as shown in the following examples.
     Ex.1 When there are 2 effective digits (any digit apart from 0), such as 560 ohm and 47k ohm (tolerance is shown by J=5%, and K=10%).

Ex.2 When there are 3 effective digits (such as in high precision metal film resistors).

 $5.62k \Omega \rightarrow 562 \times 10^{1} \rightarrow 5621 \cdots RN1/4PC \boxed{562} \boxed{1}F$

# **6. ADJUSTMENT**

# **6.1 TUMJ ASSY ADJUSTMENT**

**P** 

\* It is not necessary to adjust the ASSY normally when exchanging the ASSY. But the adjustment is necessary when exchanging the Tuner Module and IC3105 stereo decoder IC.

No.	Adjustment Name	Adj. Point	Measurement Point	Adjustment Value	Adjustment State
1	Stereo Decoder ATT adjustment (Input system adjustment)	VR3101	Audio ouput (L) (Rear panel)	465mVrms ± 23.25mV	Input a signal of Mono 1kHz/100% modulation to terrestrial tuner input. /through output.
2	Stereo Decoder Wideband adjustment (Input system adjustment)	VR3103	Audio ouputs (L/R) (Rear panel)	Rect noint of congration	Input a signal of Stereo 300Hz/30% modulation (NR-ON/L ch only) to terrestrial tuner input. Note 2
3	Stereo Decoder Spectral adjustment (Input system adjustment).	VR3102	Audio ouputs (L/R) (Rear panel)	Best point of separation ≥25dB Note 1	Input a signal of Stereo 3kHz/30% modulation (NR-ON) to terrestrial wave input. /through output Note 2

Note 1: The values for channel separation is defined as those having passed through the following filters:

100Hz - 10kHz : +0/-0.5dB

15.75kHz - 100kHz : -40dB or more

Note 2: The adjustment No.2 and No.3 should be repeated 2 times for good adjustment.

(Steps : No.1  $\rightarrow$  No.2  $\rightarrow$ No.3  $\rightarrow$ No.2  $\rightarrow$ No.3)

# 7. GENERAL INFORMATION

#### 7.1 DIAGNOSIS

#### 7.1.1 CPRM ID NUMBER AND DATA SETTING

# ■ Use DVD Recorder DATA DISC [GGV1134], Service Remote Control Unit [GGF1381] and Remote Control Unit of the model [VXX2887]

## ■ Entering the ID Number and ID Data for DVD Recorder

For the DVD recorder, it is necessary with the recoding/playback of DVD–RW disc to set an individual number (ID number) and ID data to each recorder. If the number and data are not set correctly with the following procedure, operations in the future may not be guaranteed. You will find the ID number to be set on the ID label on the rear panel.

**Important:** If no ID label is found on the rear panel, write down the specified ID number by checking it according to "How to confirm the ID number" shown below.

## The Input is Necessary When:

- " CPRM ERR" is displayed on the FL display immediately after the power is turned on or in Stop mode.
- When the MAIN ASSY, DRIVE ASSY or the HDD is exchanged.

DVR-510H-S

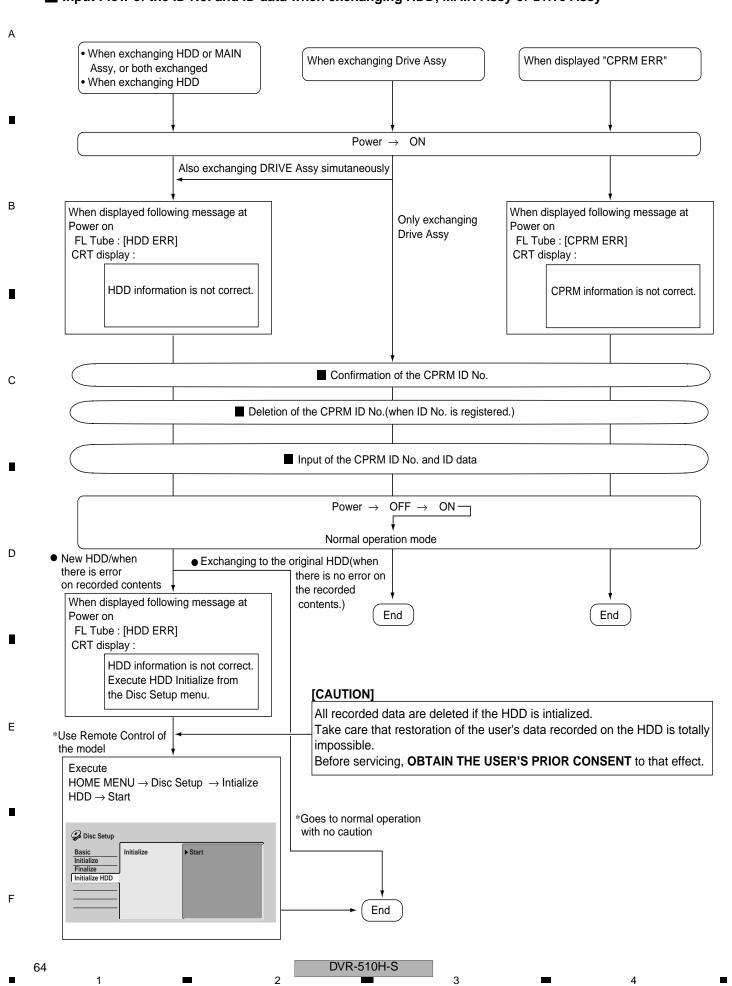

63

В

D

Ε

## ■ Input Flow of the ID No. and ID data when exchanging HDD, MAIN Assy or Drive Assy

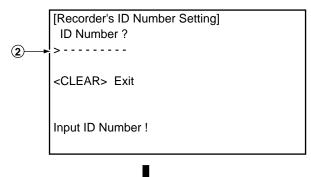

Be sure to enter the ID number in Stop mode.

Use the service remote control (GGF1381) for operations. Only opening/closing of the tray are performed from the player. The ID data disc is swept out automatically after the recorder has read the data from it.

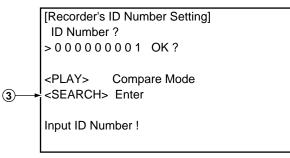

1 To enter the input mode, press ESC + STEREO sequentially in a status with no ID number set, such as after FLASH-ROM downloading.

(2) As number input is enabled when the unit enters the input mode, input the 9-digit ID number.

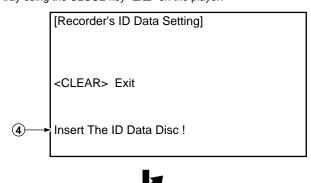

(The entered number is also displayed on the FL display.)

3 After inputting the number, press SEARCH to register the ID number.

(4) When the ID number has been registered, the unit enters the ID data input mode. (The FL display indicates "INSERT ID.") In this condition, place the ID data disc on the tray and close the tray using the CLOSE key "■/▲" on the player.

(5) While the data are being read, the message shown in the figure at left is displayed on the screen. (The FL display indicates "LOAD ID.")

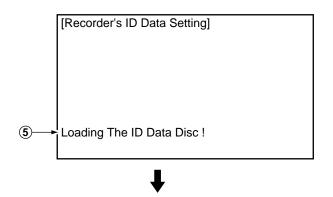

Α

В

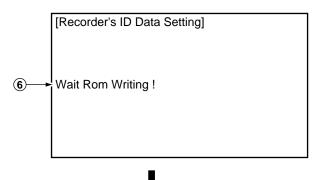

С

D

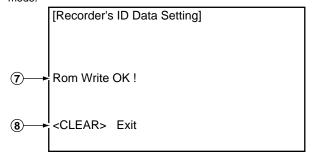

Ε

(6) When the ID data have been read, the data are written to the FLASH-ROM. (The FL display indicates "WRITE ID.")

- (7) When the ID data have been written to the FLASH-ROM, the message "Rom Write OK" is displayed on the screen. (The FL display indicates "ID DATA OK.")
- (8) After confirming this message, press CLEAR to exit the input mode.

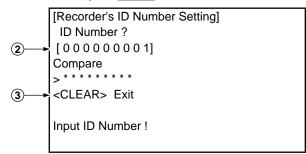

65

8

DVR-510H-S

## How to Confirm the ID Number

- (1) Press ESC+STEREO sequentially with an ID number already set, and the unit enters the ID number confirmation mode.
- (2) The set ID number is displayed on the screen (and on the FL display), permitting you to confirm it.
- (3) To exit this mode, press CLEAR.

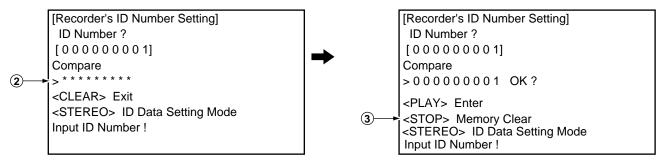

#### How to Clear the ID Number

- (1) Press ESC+STEREO sequentially with an ID number already set, and the unit enters the ID number confirmation mode.
- 2 Input the same number as the ID number you have set.
- (3) After inputting the number, press STOP.

  Only when the entered number matches the set ID number, the ID number is cleared and the unit exits this mode.

  If the numbers do not match, you must return to step 2.

  (STOP) is not accepted until 9 digits are entered.)

DVR-510H-S

For service operations, use the GGF1381 remote control unit for service.

The Service-mode screens consist of nine mode screens, which are classified into such rough categories as recording system and VR playback system, and their subscreens.

• How to enter Service mode : Press the ESC then DISP keys in turn while no GUI is displayed. The first screen (version

information, etc.) shown below is displayed.

How to exit Service mode : Press the ESC key.
 How to advance to the next Service-mode screen

: While the first screen is displayed, press directly one of the keys 1-9. For service, use the keys 2. 4 or 5. as shown below.

• How to advance to a subscreen within the same Service-mode screen

: Press the DIG/ANA key. Pressing the DIG/ANA key repeatedly will change the subscreens within the same Service-mode screen cyclically.

#### ■ The Service-mode screens to be used for service are as follows:

1 = First screen: Version information, etc.

2 = Second screen: ATA/ATAPI debug screen (Writer data)

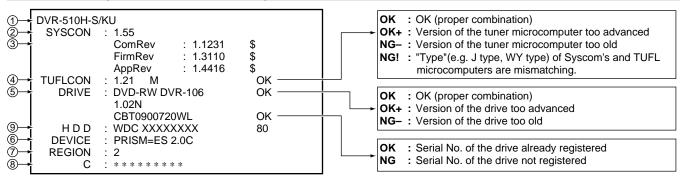

4 = Fourth screen: Error log for the VR recording system

5 = Fifth screen: Error log for the VR playback system

**Note:** After entering one of the Service-mode screens, if you wish to shift to another Service-mode screen, exit Service mode first, then reenter Service mode and select your desired Service-mode screen.

## ■ Description of Each Service-mode screen

#### 1. First screen (version information, etc.)

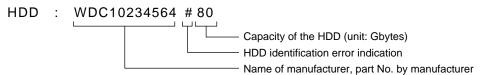

① Model name/destination

5

- 2 Version of the recorder software
- ③ Revision No. of the system-control computer software (Edition administration No. [from top to bottom, common software, firmware, application software])
- Wersion No. of the tuner microcomputer, Mask or flash (M: Mask type, F: FLASH type)
- (Model name, version No., serial No.)
- 6 Version No. of PRISM
- ⑦ Region No.
- ® CPRM data (CPRM key No.)
- 9 Data of the built-in HDD, capacity of the HDD

#### • Details on HDD data are described below:

If any abnormality exists in HDD connection, the indications shown in Table 1 below are displayed.

DVR-510H-S

Table 1: HDD data indications according to various HDD connection statuses

HDD identification conditions	Example of HDD data to be displayed	Remarks
Failure in physical identification of HDD (no connection, defective HDD, interface error)	Blank space	
Physical identification of HDD possible, but not identified	WDC 10234564 # 80	"#" is displayed as HDD identification error
Physical identification of HDD possible, HDD identified, but failure in physical formatting	WDC 10234564 ! 80	"!" is displayed as HDD identification error
Physical identification of HDD possible, HDD identified, and correct physical formatting (HDD correctly identified)	WDC 10234564 80	

While the first screen shown above is displayed, press the DIG/ANA key to enter the subscreen shown below. Note: Each time the DIG/ANA key is pressed, the display changes between the first screen and its subscreen.

#### Subscreen 1: Result of error-rate measurement

During playback in VR mode, the average error rate of the past 10 VOBUs is displayed, and during playback in DVD-Video or Video mode, the average error rate of the past 256 sectors is displayed. During playback in VR mode, the rotation rate of the drive (/: normal speed, no display = double speed) is also displayed.

#### Subscreen 2: HDD information

В

С

D

Е

_	HDD Info Life Time: 87599h 09m 05s

Cumulative HDD-on time

#### • How the data on cumulative HDD-on time are processed in memory

Storage place: Backup SRAM, Flash ROM

Timing of referring to the data on cumulative HDD-on time: When the power is turned on, the backup SRAM is referred to regarding the data on cumulative HDD-on time, and the data are stored in the RAM. If referring to the backup SRAM fails, the flash ROM is referred to.

Timing of updating the data on cumulative HDD-on time: While the HDD is on, the data on cumulative HDD-on time in the RAM is updated every 3 seconds, and every time updating is executed the data are stored in the backup SRAM. When the power is turned off, the data are stored in the flash ROM.

#### How to clear the data on cumulative HDD-on time

Backup SRAM: When the HDD Identification Setting is performed, the data on cumulative HDD-on time are automatically cleared. The HDD Identification Setting is automatically performed when the CPRM setting is performed on the CPRM setting screen (to display the CPRM setting screen, press the ESC then the STEREO keys).

Notes: The data on cumulative HDD-on time are not cleared when resetting to factory-preset values is performed.

The data on cumulative HDD-on time are not cleared when the system-control computer software is downloaded.

Flash ROM: The data on cumulative HDD-on time cannot be cleared (they are not cleared even if resetting to factory-preset values is performed or if the system-control computer software is downloaded).

Note: The data on cumulative HDD-on time in the flash ROM can be cleared if you clear the data in the backup SRAM following the above-mentioned procedures then turn off the power of the unit, because the data in the backup SRAM are stored in the flash ROM when the power is turned off.

Subscreen 1 of the second screen is displayed when the ESC, DISP, then "2" keys are pressed, in that order. Note: Each time the DIG/ANA key is pressed, the display changes cyclically among subscreens 1 to 4.

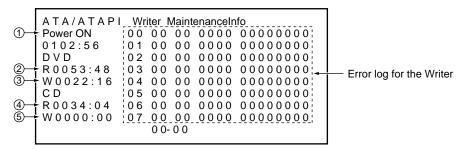

#### Subscreen 1: Command log (ALL) of ATA/ATAPI DEBUG OSD

ATA/ATAPI History - ALL 32 010000000000A000 OK 32 2A0000DEBB00063000 OK 32 2A0000DF1E000063000 OK 32 2A0000DF81000063000 OK 32 2A00000DFE4000062000 OK 32 2A00000E046000063000 OK 32 2A00000E0A9000063000 OK 32 2A00000E10C000063000 OK >32 2A00000E16F00006200023A00

#### • Subscreen 2: Command log (ERROR) of ATA/ATAPI DEBUG OSD

#### Subscreen 3: Writer mentenance information of ATA/ATAPI DEBUG OSD

The cumulative power-on time and error log that are administered by the writer are displayed. Such information is obtained when the power is turned on. Thereafter, each time the SEARCH key on the remote control unit for service is pressed while subscreen 3 is displayed, the updating command is sent, and the data on the subscreen are updated. Care must be taken when updating this subscreen, because an undesired command is inserted if it is executed while recording, etc.

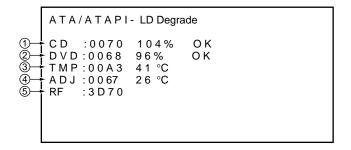

- 1 Power-on time/cumulative power-on time
- 2 Duration of emission of the laser diode (LD) for DVD-R/DVD while reading
- 3 Duration of emission of the LD for DVD-W/DVD while writing
- 4 Duration of emission of the LD for CD-R/CD while reading
- 5 Duration of emission of the LD for CD-W/CD while writing

DVR-510H-S

### • Subscreen 4: ATA/ATAPI DEBUG OSD\_LD degradation judgment

The degrees of degradation of the LD (laser diode) for the writer (LDs for CD and DVD separately), temperature, and RF level are displayed. To update the data on the subscreen, press the SEARCH key on the remote control unit for service while subscreen 4 is displayed. See Table 2 below for a description of each item and the conditions for updating data.

В

С

D

Ε

Table 2: Description of each item and conditions for updating data

No.	Item	Description	Conditions for updating by pressing the SEARCH key	Remarks
1)	CD	Degradation judgment of LD for CD. Regarded as NG when the value is 120% or higher (same standard as for the PC drive)	No disc inserted in the disc tray	*1
2	DVD	Degradation judgment of LD for DVD. Regarded as NG when the value is 120% or higher (same standard as for the PC drive)	No disc inserted in the disc tray	*1
3	ТМР	Current temperature inside the Writer	No disc inserted in the disc tray	*1
4	ADJ	Temperature (approx. 25°C) inside the Writer during adjustment	No disc inserted in the disc tray	*1
(5)	RF	RF level (16-bit data, proportional calculation performed using the actual RF level value with 2.5 V = 0xFFFF as the maximum value, displayed in 4-digit hexadecimal)	During playback of disc medium	

<sup>\*1 :</sup> For correct judgment, after leaving the unit at a normal temperature for some time, judgment must be performed immediately after the unit is turned on with no disc loaded.

DVR-510H-S

Table 3: Description of VR-playback-related errors

Error Message	Description
Tr : NullBlk	Transfer task: NULL at the top block (Detecting NG stream made at the DVR-1000 series and starting protection process.)
Tr : ReadErr	Transfer task: ATA read error
Tr : SchLate	Transfer task: ATA search late
Tr : SemTOvr	Transfer task: Timeout for gaining semaphore (no synchronization with the display)
Tr : NaviErr	Transfer task: Inconsistency between NAVI (navigator) of management data and actual NAVI
Tr : OrderEr	Transfer task: Inconsistent order
Mn : Av1Hang	Main task: Detects hang-up of AV decoder and starts recovery
ERR_RCV!	TPP task: Detects hang-up of AV decoder and starts recovery
Tp : VobDif+	TPP task: The decoder STC advances by 1 VOBU hour.
Tp : VobDif-	TPP task: The STC of the management information advances
Tp : midNULL	TPP task: The management information pointer designated was NULL.
Tp : ScanNg	TPP task: Failure to set the TPP memory when scanning was canceled.
Tp : RStepEr	TPP task: Although the reverse step had failed, the operation was forcibly terminated because the top cell was located.
Tp : tppErr	TPP task: Inconsistency occurred.
Rv : 1stTOvr	Reverse playback task: Timeout for waiting for interruption to the top VOBU immediately after starting decoding
Rv : OpnTOvr	Reverse playback task: Timeout for waiting for B-picture of the open GOP immediately after starting decoding
Rv : OplTOvr	Reverse playback task: Timeout for waiting for I-picture of the open GOP immediately after starting decoding
Rv : LnkTOvr	Reverse playback task: Timeout for waiting for link
Rv : LnkFail	Reverse playback task: Starts compensation by detecting link failure
Rv : R2FTOvr	Reverse playback task: Starts retrial after detecting timeout from reverse pause to forward pause
Rv : TopVbEr	Reverse playback task: Forced termination because of a possible error of the top data during reverse normal playback
Rv : OrderEr	Reverse playback task: Inconsistent order
Av : B/CTOvr	AV1: Buffer-clear timeout
Av : StrmOvr	AV1: Timeout for waiting for stream ready
Av : TpmTOvr	AV1: Timeout for TP mode change
Av : SpmTOvr	AV1: Timeout for a step command
CC_OS_ERR	Closed caption task: OS error

- Any error message marked with \* is displayed "RecErr : ------" on the Subscreen 1 of the fourth screen.
- : Indicates an error of the MPEG encoder : Indicates an error of the drive system
- In a case of an error in the drive system, scratches or dirt on a disc, or a problem of the drive itself (dirty pickup) may be suspected.

Abbreviations:
ECC = 4 byte Code for Error Correction
UDF = Universal Disc Format
PCA = Power Calibration Area
OPC = Optical Power Control
NWA = Next Writable Address

RMA = Recording Management Area MKB = Media Key Block TMP\_VMGI = Temporary Video Manager

Information
Border = from Lead-in to Lead-out

VMG = Video Manager

Table 5: Description of VR-recording-related errors (related to the HDD)

Error Message	Description	
HDD unauthor	Inconsistent HDD serial No.	
TT Rec Over	Title recording time full	
HDD Reset Done	HDD Reset executed	
HDD Buff High	Higher-level process executed for the HDD buffer	
HDD Trans Err	DMA error in HDD copy transfer	
HDD Zero WR	MBR readout generated	
HDD Initialize	HDD initialized	
HDD MBR NG	Inconsistent MBR data	
HDD SIG NG	Inconsistent HDD Management Data Magic	
HDD INFO BAD	Incorrect HDD Management Data	
HDD IRRG POFF	Abnormal power off	
HDD SMART NG	Inappropriate HDD SMART	
VCHDD Info NG	Obtaining Video Mode Copy HDD Cell information failed	
VC Pck Anl NG	Analyzing Video Mode Copy Pack failed	
VC VOBU SizeE	Inappropriate Video Mode Copy VOBU Size	
Strm TransfNG	Inappropriate Video Mode Copy Stream Transfer	
VC FlushC NG	Inappropriate Video Mode Copy Flush Cache	
VC Transf Stp	Video Mode Copy Transfer Stop	
VC CopyCancel	Video Mode Copy Cancel	
VC Idling NG	Video Mode Copy idling failed	
VC TSO BLK NG	Video Mode Copy TSO Block transfer not completed	
VC Cell Max	Maximum number for Video Mode Copy Cells exceeded	
VC HDD Inf NG	No information on Video Mode Copy HDD	
VC HDD C Err	Inappropriate Video Mode Copy HDD content

#### **Table 6: List of Key Codes**

Α

В

С

D

Е

#### How to enter each check mode

Test mode remote control unit : [A8\*\*]

Remote control unit supplied with the DVR : [AB\*\*]

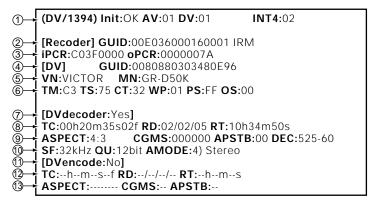

No.	Check Item	Key Input	Operation / purpose	Remarks	
		$[ESC] \to [A.MON]$	Turns on/off EE mode cyclically		
1	EE system (same as preview)	[PLAY]	Starts the EE system in EE mode (main-unit setting rate)	Make sure that CGMS = 11 becomes when CGMS = 10 is input. EE mode: Simulation mode for recording status	
		[STOP]	Stops the EE system in EE mode	gg	
2	Error-rate measurement	[ESC] → [SIDEB]	V-mode recording: After recording for 10 seconds, the unit starts playback while displaying the error rate. DVD-Video: The error rate is automatically measured, then the result will be displayed.	For details, see " 7.1.4 ERROR RATE MEASUREMENT ".	
	Settings for an editing areas	[ESC] → [CHP/TIM]	Enters Adjustment mode for AVIO settings	Settings are made for the selected input (TUNER, LINE).	
3	Settings for specific areas	[ESC]	Determines the settings, then exits Adjustment mode	For details, see " 7.1.5 SETTINGS FOR SPECIFIC AREAS ".	

- How the ESC code is processed

   When the ESC code is received, ESCAPE mode is entered, but in combination with the code(s) that follow(s), a specific meaning is added.

   If ESC codes are received continuously, ESCAPE mode is retained.

Press the ESC, DISP, then "3" keys, in that order.

Boldface alphanumerics : Fixed indications Nonboldface alphanumerics : Variable indications

Α

В

С

D

Е

No.	Item	Description	Remarks	
	Init	Whether the initialization of uPD72893A (1394LINK & DVcodec IC) has been completed (OK) or not (NG)	In a case of NG, communication with uPD72893A may have failed.	
	AV	Number of AV devices on the local bus		
① <b>DV</b>		Number of DV devices on the local bus	If the number does not become 01 even if a DV device is connected, identification of that device fails.	
	INT4	Number of executing INT4(PIO) interrupt processing routines until a POWER ON notification arrives from uPD72893A (normally, 02)		
2	GUID	GUID set in ConfigROM of the unit	In a case of ROOT (IRM), IRM is displayed at the rightmost of the GUID indication	
(3)	iPCR	iPCR value of the unit		
(3)	oPCR	oPCR value of the unit		
4	GUID	GUID set in ConfigROM of the connected DV device	Data are displayed only if one DV device is identified. If the connected DV device is ROOT (IRM), IRM is displayed at the rightmost of the GUID indication	
VN Vendor name set in ConfigROM of the connected DV device			Data are displayed only if one DV device is identified. (Depending on the device, the vendor name may not be set in ConfigROM.)	
5	MN	Model name set in ConfigROM of the connected DV device	Data are displayed only if one DV device is identified. (Depending on the device, the vendor name may not be set in ConfigROM.)	
	ТМ	Transport Mode data obtained from the DV device		
	TS	Transport State data obtained from the DV device		
6	СТ	Cassette Type data obtained from the DV device		
	WP	Copy-protection data obtained from the DV device	Data are displayed only if one DV device is identified.	
	PS	Power-state data obtained from the DV device		
	os	Output signal mode data obtained from the DV device		
7	[DVdecode:XXX]	Whether Yes (in the process of requesting DV input) or No is indicated in XXX	Normally, Yes is indicated only when CH is set to DV	

DVR-510H-S

8

**2 3 4** 

No.	Item	Description	Remarks	
8	тс	Time-code data of the DVdecode Stream, or response data of the Time Code command	Stream time-code data are obtained when playback in the forward direction is performed. Otherwise, time-code data are obtained through an AV/C command.	
	RD	Rec Date of DVdecode Stream		
	RT	Rec Time of DVdecode Stream		
	ASPECT	Aspect Ratio of DVdecode Stream		
	CGMS	CGMS of DVdecode Stream (from left to right, CGMS data of bits 5-4: Audio ch2, bits 3-2: Audio ch1, and bits 1-0: Video)	Recording of DV input cannot be performed unless the value of CGMS is 00.	
9	APSTB	APS trigger bit of DVdecode stream		
	DEC	With/without DVdecode stream input	With input: Signal type (525-60, 625-50, 1125-60, 1250-50, or Invalid) is indicated, Without input: "No" is indicated.	
10	SF	Sampling Frequency of DVdecode Stream	If SF is 44 kHz, it is considered that 44.1-kHz audio is input, and sound is muted on the unit.	
1 10	QU	QUANTIZATION of DVdecode Stream		
	AMODE	AUDIO MODE of DVdecode Stream		
11)	[DVencode:XXX]	Whether Yes (in the process of requesting DV output) or No is indicated in XXX	questing DV Normally, Yes is indicated only with HDD or DVD playback	
	TC	TIME CODE of DVencode stream		
12	RD	REC DATE of DVencode stream		
	RT	REC TIME of DVencode stream		
	ASPECT	Aspect Ratio of DVencode stream		
13	ссмѕ	CGMS of DVencode stream (common to video, audio ch1 and audio ch2)	Normally, sources other than CGMS=00 are not output.	
	APSTB	APS trigger bit of DVencode stream

# ■ Simple Diagnosis

5

5

Symptoms	Location in the Debug Screen	Items to be Checked, and Conditions	Possible causes
No operation for either DV	Θ	Check the init indication:  OK: Initialization of DV-related LSIs (IC5101, IC5202) appropriately completed NG: Communication failure between DV-related LSIs (IC5101, IC5202) and HOST microcomputer (IC1001). Initialization of DV-related LSIs (IC5101, IC5202) has not been completed properly.	Defective IC, defective soldering, defective power supply, etc.
		Check the number of DV devices when one DV device is connected to the recorder:  10:  The connected DV device is correctly identified.  Other than 01: The connected DV device is not correctly identified.	Defective DV terminals, improper connection of the DV-terminal board, defective IC, defective cables, an IEEE 1394 device other than the DV device connected
	©	Check of DV decoding when the recorder channel is set to DV: Yes: The recorder is in the process of a DV input operation No: The recorder is not executing a DV input operation	Defective IC, defective soldering, defective power supply, etc.
No picture nor sound for DV input	6	Check DEC: 525-60: An NTSC DV signal is input from the DV device. 625-50: A PAL DV signal is input from the DV device. No DV signal is input from the DV device.	Defective DV terminals, improper connection of the DV-terminal board, defective IC, defective source device Note: As to a model having the Input Line System setting, if the setting and the actual input signal system do not match, no picture appears.
DV input recording impossible	6	Check CGMS: 00: A copy-permitted source is being input. Other than 00: A copy-protected source is being input.	Recording cannot be performed for a copy-protected source.
No sound for DV input	(1)	Check SF: 32 khz: An audio signal with 32-kHz sampling frequency is being input. 48 khz: An audio signal with 48-kHz sampling frequency is being input. 44 khz: An audio signal with 44.1-kHz sampling frequency is being input.	An audio signal with 44.1-kHz sampling frequency is muted.
No picture nor sound for DV output	€	Check DVencode during DVD/HDD playback: Yes: The recorder is in the process of a DV output operation No: The recorder is not executing a DV output operation (No is also displayed during playback of copy-prohibited sources or simultaneous-recording/playback.)	Defective IC, defective soldering, defective power supply, etc.

#### 7.1.4 ERROR RATE MEASUREMENT

#### How to enter Error-Rate Measurement mode

Press the ESC key then the SIDE-B key of the remote control unit for service to enter Error-Rate Measurement mode. During playback of DVD-VIDEO, Error-Rate Measurement mode can also be entered by pressing the ESC key then the PLAY key.

#### How to exit Error-Rate Measurement mode

Press the ESC key. The error-rate display disappears, and Error-Rate Measurement mode is exited.

Note: The error rate cannot be measured in VR mode or during CD playback.

#### **Functions**

В

С

D

Е

#### 1. While "DVD" is selected(\*)

1 -1 Video-mode recording (recording medium)

In this mode, DVD recording is automatically performed for 10 seconds, the recorded DVD title is played back while the error rate is being measured, then as soon as playback of the recorded DVD title is finished, playback stops.\*1 After error-rate measurement is finished, the average error rate will be displayed on the FL display and OSD. Only in a case in which the calculation of the average error rate fails, the tray will open.

2 -2 DVD-VIDEO (playback medium)

Only during playback, when the ESC key then the SIDE-B key (or the ESC key then the PLAY key) are pressed, the error rate is calculated and displayed on the FL display and OSD.(\*2) Only in a case in which the calculation of the average error rate fails, the tray will open.

#### 2. While "HDD" is selected(\*)

In this mode, HDD recording is automatically performed for 10 seconds. Then HDD- to - DVD- copy is performed. Then DVD is selected automatically and the copied DVD title is played back while the error rate is being measured, then as soon as playback of the recorded DVD title is finished, playback stops. After the error-rate measurement is finished, the average error rate will be displayed on the FL display and OSD. Only in case in which the calculation of the average error rate fails, the tray will open.

(\*): to change the mode between DVD and HDD, press the HDD/DVD key on the front of the recorder.

#### ■ Changes of display

#### Table 1: Video mode (recording medium) while "DVD" is selected

Operation	Г	Display
Operation	FL Display	OSD (On Screen Display)
"ERROR RATE" is displayed on the FL display for an instant.	ERROR RATE	
DVD recording starts.	ERROR RATE	
DVD recording is performed for 10 seconds.	x x x x x	
The recorded DVD title is played back while the error rate is being measured, then as soon as playback is finished it stops.	ER x . x E - x	ERR RATE : x.xE-x -
After error-rate measurement is finished (*1), the average error rate, the measurement-finish mark (*), and the OK/NG-judgment result (*3) will be displayed on the FL display and OSD. (If the tray opens as a result of NG judgment, the display on the FL display and OSD will be retained.)	ER x.xE-x	ERR RATE : x.xE-x * OK

#### Table 2: DVD-Video (playback medium)

Onevertion	Display		
Operation	FL Display	OSD (On Screen Display)	
Only during playback, when the corresponding keys are pressed, the error rate is calculated and displayed on the FL display and OSD. (*2)	ER x . x E - x	ERR RATE : x.xE-x -	
After error-rate measurement is finished (*1), the average error rate, the measurement-finish mark (*), and the OK/NG-judgment result (*3) will be displayed on the FL display and OSD. (If the tray opens as a result of NG judgment, the display on the FL display and OSD will be retained.)	E R   x   .  x  E -  x	ERR RATE : x.xE-x * OK	

Operation	Display	
Operation	FL Display	OSD (On Screen Display)
"ERROR RATE" is displayed on the FL display for an instant.	ERROR RATE	
HDD recording starts.	ERROR RATE	
HDD recording is performed for 10 seconds, then HDD-to-DVD-copy is performed.	x x x x x	
The copied DVD title is played back while the error rate is being measured, then as soon as playback is finished it stops.	ER x . x E - x	ERR RATE : x.xE-x -
After error-rate measurement is finished (*1), the average error rate, the measurement-finish mark (*), and the OK/NG-judgment result (*3) will be displayed on the FL display and OSD.  (If the tray opens as a result of NG judgment, the display on the FL display and OSD will be retained.)	ER x.xE-x	ERR RATE : x.xE-x * OK

<sup>\*1 :</sup> Whether error-rate measurement is finished or not is judged, as shown in Table 4 below.

Table 4: On judgment whether error-rate measurement is finished or not

Recording Mode	Judgment whether error-rate measurement is finished or not	Recording/playback duration required for error-rate measurement
Video mode	After playback of a certain amount (*) of data Measurement of the 16 ECC blocks is performed 16 times, then the grand sum is used for calculation of the error rate. The capacity is as follows: 16 ECC blocks × 16 sectors × 2048 bytes × 16 times = 8388608 bytes = 67108864 bits	The time required for completion of error-rate measurement varies, depending on the input video signal to be recorded.  (The more the motion in the input video signal to be recorded is animated, the shorter the playback time required for completion of error-rate measurement becomes.)

<sup>\*2 :</sup> During DVD-VIDEO error-rate measurement, even after error-rate measurement is finished, playback continues, and the display of the error rate results is retained. In this playback mode, if Error-Rate Measurement mode is exited by pressing the ESC key, then it is reentered by pressing the ESC and SIDE-B keys (or ESC and PLAY keys), the error rate will not be updated, and the previous value is displayed. To reset the previous error rate, stop disc playback.

Table 5: List of OK/NG threshold values

Disc Type	Recording Mode	Finalized or not finalized	Reference Value	Display
DVD-VIDEO			$8.0 \times 10^{-4}$	OK / NG
DVD-R Video mode	Finalized	$1.0 \times 10^{-3}$	OK / NG	
	video mode	Not finalized	$1.0 \times 10^{-3}$	OK / NG
DVD-RW	Video mode	Finalized	1.0 × 10 <sup>-3</sup>	OK / NG
		Not finalized	$1.0 \times 10^{-3}$	OK / NG

<sup>\*3 :</sup> OK/NG judgment In DVD/VIDEO and Video Mode recording, OK/NG judgment is displayed under the following conditions:

#### 7.1.5 VIDEO ADJUSTMENT FOR SPECIFIC AREA

**Purposes:** Depending on the area, jitter may appear in a picture received by the tuner, as conditions of signals received by the tuner are different from area to area. To correct this kind of problem, the function of the System Codec AVIO control section for adjusting signals received by the tuner can be used.

**How to enter setting modes:** To enter General Setting mode, press the ESC key then the CHP/TIM key of the remote control unit for service. To enter Specific Channel Setting mode, press the DIG/ANA key in General Setting mode.

How to exit setting modes: Press the ESC key. The setting mode is exited, the OSD disappears.

#### 1. General Setting mode

This mode can be entered only during recording/playback stop. In this mode, each item and its current settings are displayed on the OSD. The currently selected input mode (TUNER or LINE) is displayed. If L1, L2, L3 or DV is selected for input, general settings for the line input can be made, and if TUNER is selected, general settings for the tuner input can be made.

#### 7.1.6 SETUP SEQUENCE

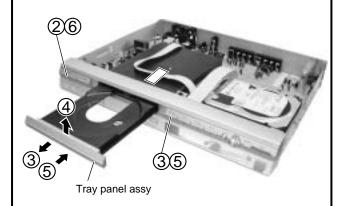

86

2

**Note:** When remove the HDD and diagnose it, order the ATAB Assy (VWV1968) and a flexible cable (40P) (VDA1977) using for connection of DRIVE Assy R6. And use it as cable extension.

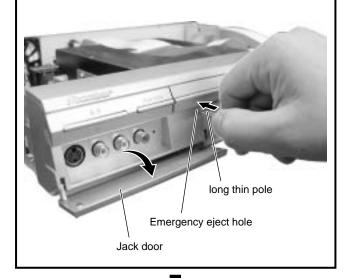

#### 1 Bonnet S, Tray Panel Assy

- (1) Remove the bonnet by removing the eight screws.
- $\bigcirc$  Press the  $\bigcirc$  STANDBY/ON button to turn on the power.
- (3) Press the ≜ button to open the tray.
- (4) Remove the tray panel assy.
- (5) Press the ≜ button to close the tray.
- (6) Press the  $\bigcirc$  STANDBY/ON button to turn off the power.

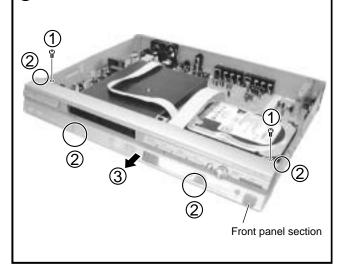

#### How to open the tray when the power cannot be on

When the player cannot eject disc tray due to power failure or any other reasons, open the jack door, and use a long thin pole and push the emergency eject hole under the tray panel to eject.

#### 2 Front Panel Section

- 1 Remove the two screws.
- Remove the four hooks.
- Remove the front panel section.

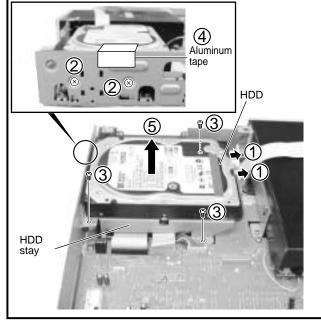

(5) Remove the HDD with HDD stay.

#### 3 HDD

- 1 Disconnect the two connectors.
- Remove the two screws.
- Remove the three screws.
- Remove the aluminum tape from the HDD side.

### 7.3 OUTLINE OF THE PRODUCT

# Main newly developed technologies

### 1. Pickup

The pickup supports quadruple-speed recording for the DVD-R/RW.

A liquid-crystal tilt servo system is adopted for the pickup.

### 2. Recording-signal-processing LSI

• UPD3320GC (DRIVE Assy: IC101)

The recording-signal-processing module of conventional models consists of two chips, but this has been integrated into a single newly developed recording-signal-processing LSI, enabling stable performance and cost reduction.

### 3. AV-signal-processing LSI

• M65672WG-B (MAIN Assy: IC1001)

The AV-signal-processing module of conventional models consists

of eleven chips, but this has been integrated into a single newly developed AV-signal-processing LSI, enabling large-scale cost reduction while maintaining the conventional functions. In the new LSI, all the basic functions necessary for a DVD recorder have been integrated. Like conventional models, this model is designed to support multitasking. The main functions are as follows:

- 3-D Y/C separation
- · Video decoding
- Frame TBC
- MPEG video encoding
- Dolby Digital Consumer Encoding
- ATA/ATAPI I/F (2 ch)
- Main CPU (32-bit RISC, 54 MHz)
- Graphics engine (OSD, scaling, mixing)
- MPEG video decoding
- Audio decoding (AC-3, MPEG)

5

- · Video encoding
- Progressive conversion
- Audio I/F
- 3-D DNR for playback

### 4. DV-signal-processing LSI

The DV-signal-processing LSI consists of the following two

UPD72862AGB-SEU (MAIN Assy: IC5101)

A 400-Mbps two-port PHY LSI in compliance with the IEEE1394a-

2000 standards

#### UPD72893AGD-LML (MAIN Assy: IC5202)

An EEE1394 link controller LSI having DV (digital video) encoding/decoding functions. Encoding/decoding of digital video signals in compliance with the SD specifications (NTSC/PAL) of the DV standard is supported. The 32-bit RISC CPU is built in for controlling the IEEE1394 bus and sending/receiving AV/C commands.

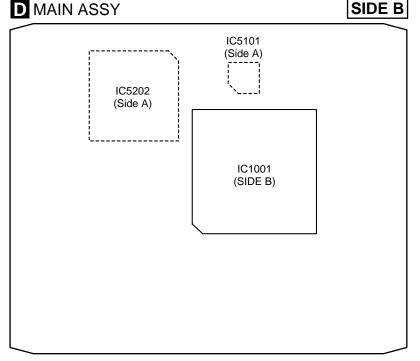

Fig.1 MAIN Assy

DVR-510H-S

В

# **■** System configuration

Α

В

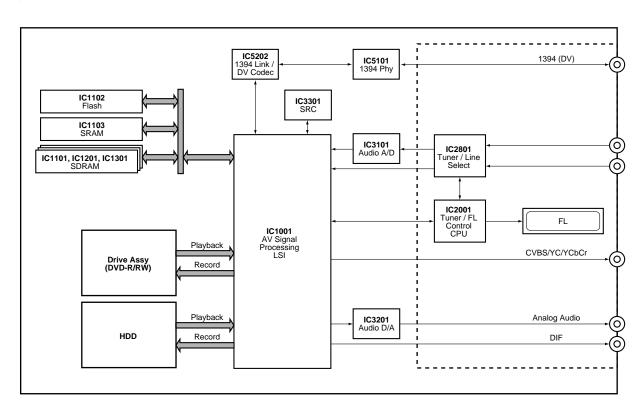

С

D

Ε

F

In each signal-processing LSI of the main function blocks, various processes have been integrated into one chip, which enables simpler system configuration. With the AV-signal-processing LSI at the center, video inputs/outputs, audio inputs/outputs, DV inputs/outputs, writer, HDD, and various memory cells are connected to it.

3

Fig2. System configuration

118

2

# New functions and specifications

In this model, the following new functions and specifications have been included in addition to those of conventional models:

### 1. Improved multitasking functions

As both the HDD and DVD drive are mounted in this model, like conventional models, the unit is designed to support various multitasking. Furthermore, this model supports DVD multitasking (only in VR mode), which was impossible with conventional models.

#### a Pursuit playback

Playback of the title being recorded by the DVD drive in VR mode or the HDD is supported.

- **b** Simultaneous recording/playback 1 Playback of a title other than that being recorded by the DVD drive in VR mode or the HDD is also supported.
- © Simultaneous recording/playback 2 DVD playback during HDD recording is supported.
- d Simultaneous recording/playback 3 HDD playback during DVD recording is supported.
- Recording during high-speed dubbing HDD recording during high-speed dubbing from the HDD to a DVD is supported.
- f Playback during high-speed dubbing Playback of an HDD title during high-speed dubbing from the HDD to a DVD is supported.

### 2. Improved dubbing functions

High-speed dubbing and normal-speed dubbing are supported, as with conventional models. A one-touch dubbing function that enables automatic selection between these dubbing functions is also provided. In this model, high-speed dubbing from a DVD (in VR mode) to the HDD is also an added capability.

### 3. Disc backup

The function of creating a backup disc for a disc recorded in Video mode is added. The data of the original DVD are transferred to the HDD, then retransferred to the DVD drive, and because no reencoding is required during data transmission between the drives, a backup disc with no degradation of video and audio signals can be created.

### 4. Advanced disc NAVI

5

In the conventional disc NAVI function, recorded titles are displayed with still pictures as a list. In the advanced disc NAVI function, the title selected with the cursor is displayed as an animated picture with sound.

### 5. Improved Still Picture menu in Video mode

The disc NAVI function, which enables displaying a list of recorded titles with still pictures, is enabled in Video mode with this model. Selection from among nine title menus is also supported.

Α

В

С

Ε

### 6. Adoption of MPEG2 SIF

In MN1-6 modes, MPEG2 SIF has been adopted, instead of the MPEG1 SIF of conventional models. This enables higher-quality recording for longer hours.

### 7. Improved editing functions

For DVD, the original/play-list editing in DVD-VR mode available with conventional models is provided. For HDD editing, play-list-editing functions almost the same as for the DVD-VR, such as title combination, separation, and partial erasure, are enabled for the HDD with this model. With conventional models, these edit functions are available only for the dubbing list. The automatic-chapter-mark-insertion function in response to a change in audio type (stereo, monaural, bilingual) makes commercial-cutting editing easier.

### 8. Various-format playback

Playback of WMA, MP3, and JPEG formats is supported.

### 9. Other functions and specifications

The following main functions and specifications adopted with conventional models are also provided with this model:

- 192-kHz, 24-bit DAC
- 48-kHz, 20-bit ADC
- Digital 3-D Y/C separation circuit
- Digital frame TBC
- 3-D DNR
- DV (iLink) input/output (DVR-610H)
- Built-in BS tuner (DVR-510H/515H/610H)
- Playback with commercials skipped
- CD/video-CD playback
- Picture creation
- Recording with 3/4-D1 and 2/3-D1 resolutions
- Recording mode with 32-step MNs
- LPCM recording
- High-resolution GUI
- Progressive output
- · SRS TruSurround

## 7.4 CAUTIONS ON HANDLING THE HDD

### (1) Cautions on Handling the HDD

- The HDD is very sensitive to shocks and vibrations. Care must be taken especially during operation (when the power is on).
- The HDD is very sensitive to electrostatic charges.
- Rapid change in temperature or humidity may cause deterioration of the HDD.

Note: After receiving damage caused by any above-mentioned factors, the HDD may operate normally for dozens or some hundreds of hours but then suddenly crash. If you are certain you have damaged a new repair part (HDD) while making repairs, do not use the part.

The HDD is about 10 times as sensitive to shock during operation than during nonoperation.

#### Reference: Main specifications on damage to the HDD

	During operation	During nonoperation
Shock G (acceleration)	<approx. 20="" g<="" td=""><td><approx. 200="" g<="" td=""></approx.></td></approx.>	<approx. 200="" g<="" td=""></approx.>
Temperature change	< 20°C/hour	
Moisture change	< 20%	%/hour

# Reference: Estimate value of falling distance vs. shock (G) when the HDD is dropped without protection

Falling Landing surface	Granite surface	Concrete floor	Synthetic-resin- coated table	Antistatic sponge		
0.5 inch / 12.7 mm	387	217	200	26		
1.0 inch / 25.4 mm	595	457	310	37		
2.0 inch / 50.8 mm	1133	600	680	70		
4.0 inch / 101.6 mm	1795	1040	1050	267		

# (2) Cautions on handling the product on which the HDD is mounted or the HDD as a repair part, and examples of dangerous handling

### [Cautions on handling the product on which the HDD is mounted]

• While the unit is turned on, the HDD is always in operation. Be sure NOT to impart shock to the unit.

### • Examples of dangerous handling: while the power is on

• Bumping on the bonnet

В

С

D

Е

- Dropping an object, such as a small screwdriver or remote control unit, onto the bonnet, or bumping an object against the cabinet
- Moving the unit by dragging
- Stacking another product on the unit

Note: Be sure NOT to impart shock, such as bumping or hitting a screwdriver against the HDD, during diagnosis with the bonnet open.

#### • Examples of dangerous handling: while the power is off

- Imparting strong shock, although the HDD is more resistant to shock when the power is off
- Dropping the unit from a height of several centimeters, or after lifting one side of the unit up, then letting the unit drop.
- Do NOT move the unit immediately after the power is turned off. Wait at least 30 seconds after the indication on the FL display changed from POWER OFF to the clock indication before moving the unit.

If the AC power cord is accidentally disconnected before turning the unit off, wait at least for one minute before moving it. In this case, damage to the HDD caused by sudden shutoff may be small, because the emergency relief mechanism is activated. However, if sudden shutoff occurrs during recording or playback, recorded data may be damaged. Be sure to check operations.

### [Cautions on handling the HDD as a repair part]

- 1. Handle the HDD in a safe environment:
  - Handle the HDD over an antistatic pad that can also absorb shock.
  - Wear wrist bands to prevent electrostatic charges generated in your body from affecting the HDD.
- 2. The following must be observed when handling the HDD:
  - Handle one HDD at a time. Do NOT hold several HDDs at the same time.
  - Grip the HDD on both sides so that you do not touch its terminals or circuit boards.
  - Do NOT stack one HDD onto another HDD (even if the HDDs are protected in antistatic bags).
  - Do NOT bump the HDDs against one another.
  - Do NOT bump any tool, such as a screwdriver, or other hard object against the HDD.
  - When a repair part (HDD) is transported and there is a large temperature difference between outdoors and indoors, to the indoor, leave it in its package for about a half day to gradually cool or warm the HDD to room temperature before unpacking it.

### [Notes on packing for shipment]

- When returning a defective HDD for analysis, handle with care as if it were a good product. Otherwise, the results of analysis may not be correct.
- When packing, use the antistatic bag and packing materials in which the repair part for service was delivered. Attach a copy of the slip for service or a memo stating symptoms in as much detail as possible.

5

\*Pioneer's part No. is not stamped.

			Maxtor		Western Digital		Seagate	
Model Name	Capacity	Pioneer's Part No. (for service)	Manufacture's Part No.	Pioneer's Part No. (for service)	Manufacture's Part No.	Pioneer's Part No. (for service)	Manufacture's Part No.	
DVR-510H-S	80GB	VXF1010	4R080L0-	VXF1030	WD800LB-	VXF1036	ST38001□ACE-	

- When replacing the HDD, carefully check the capacity and manufacturer's part No. on the part label to avoid replacing with a similar but inappropriate product. You can also check the model No. of the mounted HDD on the Service mode screen.
- Do NOT use repair parts, such as commercially available HDDs, other than those designated above, as their functions, performance or reliability cannot be guaranteed.

DVR-510H-S

\_

# Disc / content format playback compatibility

### General disc compatibility

Α

В

С

D

Е

This recorder was designed and engineered to be compatible with software bearing one or more of the following logos:

DVD-Video

DVD-

DVD-RW

Audio CD Video CD

CD-R CD-RW

Fujicolor CD

Also compatible with KODAK Picture CD

🕏 is a trademark of Fuji Photo Film Co. Ltd.

Other formats, including but not limited to the following, are not playable in this recorder:

### DVD-Audio / SACD / DVD-RAM DVD-ROM / CD-ROM\*

\* Except those that contain WMA, MP3 or JPEG. See also Compressed audio compatibility and JPEG file compatibility below.

DVD-R/RW and CD-R/RW discs recorded using a DVD recorder, CD recorder or personal computer may not be playable in this recorder. This may be caused by a number of possibilities, including but not limited to: the type of disc used; the type of recording; damage, dirt or condensation on either the disc or the pick-up lens. See below for notes about particular software and formats.

#### DVD-R/RW compatibility

This recorder will play and record DVD-R/RW discs that use DVD-Video format (Video mode), and DVD-RW discs that use the Video Recording (VR) format. It is compatible with DVD-RW Ver. 1.1 and Ver. 1.1 / 2x, and DVD-R Ver. 2.0 and Ver. 2.0 / 4x.

### CD-R/RW compatibility

This recorder will play CD-R and CD-RW discs recorded in CD Audio or Video CD format, or as a CD-ROM containing MP3, WMA or JPEG files. However, any other content may cause the disc not to play, or create noise/ distortion in the output.

This recorder cannot record CD-R or CD-RW discs.

### PC-created disc compatibility

If you record a disc using a personal computer, even if it is recorded in a "compatible format" as listed above, there will be cases in which the disc may not be playable in this recorder due to the setting of the application software used to create the disc. In these particular instances, check with the software publisher for more detailed information.

Check the DVD-R/RW or CD-R/RW software disc boxes for additional compatibility information.

### WMA (Windows Media Audio) compatibility

The Windows Media logo printed on the box indicates that this recorder can playback WMA data.

WMA is short for Windows Media Audio and refers to an audio compression technology developed by Microsoft Corporation. WMA data can be encoded by using Windows Media Player version 9 (or less) or Windows Media Player for Windows XP.

Windows Media, and the Windows logo are trademarks, or registered trademarks of Microsoft Corporation in the United States and/or other countries.

### Compressed audio compatibility

This recorder will play CD-ROM, CD-R, and CD-RW discs containing files saved in the MPEG-1 Audio Layer 3 (MP3) or Windows Media Audio (WMA) format with a sampling rate of 44.1 or 48kHz. Incompatible files will not play and the message Cannot play this file format will be displayed (CAN'T PLAY in the front panel display).

Fixed bit-rate MP3 files are recommended. Variable bitrate (VBR) MP3 files are playable, but playing time may not be shown correctly.

This recorder is compatible with 44.1 and 48 kHz WMA files encoded with Windows Media Codec 8. Files encoded using Windows Media Codec 9 may be playable, but some parts of the specification are not supported (specifically, Pro, Lossless, Voice and VBR WMA files).

WMA files encoded with DRM (Digital Rights Management) copy protection will not play and the message Cannot play this file format will be displayed (CAN'T PLAY in the front panel display).

122

DVR-510H-S

The CD-ROM used to compile your WMA/MP3 files must be ISO 9660 Level 1 or 2 compliant. CD physical format: Mode1, Mode2 XA Form1. Romeo and Joliet file systems are both compatible with this recorder.

Use CD-R or CD-RW media for recording your files. The disc must be finalized (i.e. the session must be closed) in order to play in this recorder.

This recorder only plays tracks that are named with the file extension .MP3 or .WMA (upper or lower-case).

When naming MP3 and WMA files, add the corresponding file name extension (.mp3 or .wma). Files are played according to the file extension. To prevent noise and malfunctions, do not use these extensions for other kinds of files.

This recorder can recognize up to 99 folders and 999 files (WMA/MP3). If a disc exceeds these limits, only files and folders up to these limits will be playable. Files and folders are read/displayed in alphabetical order. Note that if the file structure is very complex, you may not be able to read/play all files on the disc.

Folder, track and file names (excluding the file extension) are displayed.

There are many different recording bit-rates available to encode MP3 files. This recorder has been designed to be compatible with all of them. Audio encoded at 128Kbps should sound close to regular CD Audio quality. This recorder will play lower bit-rate files, but please note that the sound quality becomes noticeably worse at lower bit-rates.

### JPEG file compatibility

This recorder is compatible with Fujicolor CD and Kodak Picture CD formats, as well as CD-R/RW/ROM discs containing JPEG files.

Baseline JPEG and EXIF 2.2<sup>\*1</sup> still image files are supported (horizontal resolution from 160–5120 pixels; vertical resolution between 120–3840 pixels).

\*1 File format used by digital still cameras

The CD-ROM used to compile your JPEG files must be ISO 9660 Level 1 or 2 compliant. CD physical format: Mode1, Mode2 XA Form1. Romeo and Joliet file systems are both compatible with this recorder.

This recorder only displays files that are named with the file extension .jpg, .jpeg, .jif, or .jfif (upper or lower-case).

The recorder can load up to 99 folders and 999 files at one time. If there are more files/folders than this on the disc then more can be reloaded.

#### 16 OVER

Lights when the analog audio input level is too high.

126

### VHF/UHF IN/OUT

Connect your TV antenna to the VHF/UHF IN jack. The signal is passed through to the VHF/UHF OUT jack for connection to your TV.

### 2 Audio/video inputs 1 and 3

Two sets of audio/video inputs (stereo analog audio; composite and S-video video) that you can use to connect to satellite receivers, TVs, VCR or other source component for recording.

### Audio/video outputs 1 and 2

Two sets of audio/video outputs (stereo analog audio; composite and S-video video) that you can use to connect TVs or monitors.

### 4 COMPONENT VIDEO OUT

A high-quality video output for connecting to a TV or monitor with a component video input.

#### 5 DIGITAL OUT OPTICAL

A digital audio output for connecting to an AV receiver, Dolby Digital/DTS decoder or other equipment with optical digital input.

#### 6 CONTROL IN

Use to control this recorder from the remote sensor of another Pioneer component with a CONTROL OUT terminal and bearing the Pioneer mark. Connect the CONTROL OUT of the other component to the CONTROL **IN** of this recorder using a mini-plug cord.

#### 7 ACIN

Connect to a power outlet using the supplied power cable after making all other connections.

### Front panel connections

On the left side of the front panel a flip-down cover hides a third audio/video input, consisting of an S-video and standard (composite) video jack, and stereo analog audio

On the right side is the DV input/output i.LINK connector. This is for connection to a DV camcorder.
